In part 1 of our multi-week series on parental controls for the Mac, we'll provide some general overviews about parental controls and explain the types of controls available for Macs. We'll also describe a few of the major Mac-specific features that make parental controls available. Featured Software Today's Macintosh computers come with powerful built-in parental controls that help parents protect kids from accessing harmful or inappropriate content and keep their kids from accidentally disrupting family activities. With the help of Parental Controls in Mac OS X, parents can monitor their kids' time spent on computers and restrict access to Web sites or applications that are inappropriate for children. Parents can also set parental limits for email and instant messaging, and monitor Internet surfing habits. Parents can also customize the parental controls to their individual child's needs. For example, parents can set restrictions based on content or time of day. They can also set different profiles for each user, assign different websites to particular profiles, and automatically approve requests for certain sites. Parental Controls for Mac OS X also provides extensive web filtering for kids, and the user can turn parental controls off or on at any time.
