José A Arias - Geotechnical Engineer - BIM Insider. published: 12 Mar 2018 GEO5: Geotechnical software 2016 review In this video i show you my experiences with Geo5, software for civil engineering. How does it work? Its's in oder to find the best software for civil engineering, which is not tha difficult. But there is a problem with geotechnical engineers - we are spread out over the world, and all kind of software is targeted to one architecture. And i want to find a program to find the same, which is in this case was GEO5. And it is not tha difficult to make a program for thta, but there is no software for it, so i began to work on it. And the results are quite strange. The most impressed feature, which is not the same as we expected, is the work in the interior. Is GEO5 as good as we expected, or do you find any bugs or mistakes? So i get the impression that GEO5 is the best to achive better construction quality and then cost efficiency, but maybe I'm wrong. As always, you should read the license and the... published: 18 Mar 2017 Geotechnical Analysis - Faceted Hole Example This video tutorial explains how to perform a backfill analysis on a faceted hole using the GEO5 software. Backfill analysis is the process of calculating the backfill load and the backfill pressure on a hole wall. Geotechnical analysis, sometimes called geomechanical analysis, is the determination and use of geotechnical properties, properties that are a function of rock type and properties.
